

GRID CAPACITY, DELIVERED AS A SERVICE. NO SOFTWARE PURCHASE.

FlexEnergi aggregates behind-the-meter residential, commercial, and agricultural resources into a unified virtual power plant. For a distribution cooperative, that is firm, dispatchable capacity sourced from your own members – procured rather than built, on a fixed \$/kW-year basis – shaving coincident peak to lower demand charges from your G&T.

HOW THE PROGRAM RUNS

ENROLL, WITH NISC

Enrollment of residential, commercial, and agricultural members across your service territory, with eligibility verified against NISC.

MANAGE

Devices onboarded to the Edge DERMS platform. Incentives, customer support, and administration handled end to end.

OPERATE, WITH NISC

Daily dispatch and load shaping, with measurement and verification of capacity delivered. Integrated with NISC MDMS to calculate and report incentives.

FLEXENERGI – SERVICE AT A GLANCE

Pricing model	\$/kW-yr, fixed	Priced like the asset it replaces
Resource mix	Res + C&I + Ag	One portfolio, one contract
Dispatch modes	Load Shaping	Peak shaving, load build, or managed EV charging
Dispatch granularity	Feeder-level	Firm dispatch per feeder, per substation, or system-wide
G&T deferral	Non-wires	Relieve constrained feeders and substations to defer distribution upgrades
Delivery model	Turnkey	Recruit → manage → operate

WHAT IT IS

ONE VIRTUAL POWER PLANT, RUN END TO END

FlexEnergi recruits and aggregates member-owned distributed energy resources behind the meter and operates them as a single virtual power plant. The model is fully turnkey.

Targeted member marketing and recruitment, full program management, an edge-enabled DERMS platform, and all the operational support a program needs to run — provided as one service.

WHAT YOU GET

LOAD SHAPING, ANY TIME OF DAY

FlexEnergi shapes load whenever it's needed — firm capacity across all 8,760 hours of the year, not just the peak.

FIXED \$/KW-YEAR

You pay a fixed price per kilowatt-year. No metering surprises, no settlement math — capacity priced like the asset it replaces.

A PORTAL FOR EVERY STAKEHOLDER

Purpose-built portals for residential members, commercial members, program managers, and grid operators — everyone sees exactly what they need.

FITS YOUR BACK OFFICE, INCLUDING NISC

The platform integrates with NISC, Spry, and Salesforce CIS, plus ADMS/SCADA and MDMS — so enrollment, billing, and dispatch data stay in the systems your staff already use.

THE COMPANY

FlexEnergi, a subsidiary of Accurant Energy Holdings, is a grid-edge technology and services company based in Washington state, delivering always-on, dispatchable capacity from behind-the-meter assets across residential, commercial, industrial, and agricultural accounts. FlexEnergi is led by a team of industry veterans with decades of combined experience in demand response and distributed energy resources at leading utilities and technology companies. **Contact us to schedule a demonstration:** sales@flexenergi.com.

WHY A CO-OP RUNS A VPP — AND WHY FLEXENERGI

LOWER WHOLESALE DEMAND CHARGES

Coincident peak sets what you pay your G&T. Shifting load in those hours cuts the demand charge without touching rates or asking members to go without.

FLEXENERGI Capacity is procured, not built — a fixed \$/kW-year price you can put in a budget. No software license, no shared-savings math.

MEMBER-OWNED LOAD, MEMBER-FACING VALUE

The flexibility already exists behind your members' meters — water heaters, HVAC, batteries, EVs. A VPP turns it into a program members are paid to join.

FLEXENERGI We market and enroll on your behalf, verify eligibility against your NISC, and run member support — no added headcount on your side.

NON-WIRES ALTERNATIVE TO UPGRADES

Relieving a constrained feeder or substation defers a rebuild — capacity where you need it, at a fraction of the cost per kW of steel and copper.

FLEXENERGI Dispatch is firm at feeder and substation level, not just system-wide, so the relief lands where the constraint is.

RATE STABILITY

Purchased power is the largest line on the budget and the most volatile. Shaping load in peak hours reduces exposure to price spikes and settlement surprises.

FLEXENERGI We shape load across all 8,760 hours, not just event days — moving load off the hours that set your price, at a cost you know in advance.

RELIABILITY AND RESILIENCE

Distributed flexible resources help during extreme weather and supply shortfalls, when resource adequacy is tightest and load growth is least forgiving.

FLEXENERGI Our edge-enabled DERMS keeps devices responding when the network is degraded, so capacity holds up in the hours it matters.

MISSION AND REGULATORY ALIGNMENT

Demand-side management is rewarded under RUS financing and many state programs, and a member-facing VPP shows the co-op out ahead of DER growth.

FLEXENERGI Delivered as a service: no capital software purchase, and reporting your board and members can read straight out of the platform.
